The journey I here present your lordship is entirely Roman; for I went from London full northward to the banks of the Humber, upon the famous Hermon-street road, passing through Lincoln; then coasting about a little, at Lincoln again I took the Foss way to its intersection of the Watling-street in Warwickshire: upon that I returned back to London, and pursued it to the sea-coasts of Kent: likewise some part of the Icening-street, as it crosses the others, where it lay not too far out of my main route, was the subject of my enquiry: so that in this account is somewhat of all these four great roads of Britain, which our old monkish writers make a considerable harangue about, but are scarce able fully to distinguish them, and of the reason of their names say but little to our satisfaction: but the ways themselves, as drawn quite across the island in different directions, are sufficiently manifest to a traveller of common sagacity. Though my discoveries herein are mean enough, yet I reckon this an happy era of my life, because, the very day before I undertook it, I had the good fortune to be known to your lordship, and at the end of it enjoyed the pleasurable repose of your delightful seat at Eastwel, but what is more, your own conversation: since then your many favours, like all other felicities in life, give me uneasiness in the midst of joy, as sensible of my own little merit. I have no hope indeed of retalia=
ting; and I know that great minds like yours imitate Providence, expecting no return from its beneficiaries: but it is consentaneous to human nature to endeavour at it, and offer tokens of gratitude, however unequal. The delight you take in rescuing the monuments of our ancestors, your indefatigable zeal in collecting them, your exquisite knowledge in the Greek, Roman, and British antiquities, and especially your great love for those of your own country, which you continually commit to writing in your private commentaries, add a reputation to these studies, and make the Muses hope for a sunshine, when men of your lordship’s noble birth enter tain them with that familiarity and condescension which was one great glory of the Augustan age.

For arts military and civil, . . .

119

Watling-street.

According to method I should speak of Londinium here: but because the great deal that may be said thereupon will make a discourse by itself, we content ourselves at present with giving the plan of it, as we suppose it might appear in the times of the Romans: and so continuing our tour into Kent, will finish the whole continuation of the Watling-street with what few memoirs I could pick up at that time.

As Old-street went on the north of London, so the proper Watling-street we have been upon, since High-cross in Warwickshire, went on the south; from Stane-gate ferry across St. George’s fields, so south of the Lock hospital to Deptford and Black heath: a small portion of the ancient way pointing to Westminster abbey is now the common road on this side the nearest turn-pike; but the continuation of it is quite lost since the bridge was made, and all roads meet at that centre as so many radii. When London became considerable, the ferry over-against it, from being better attended, rendered that at Stangate almost useless; so passengers went through the city by Canon-street, Watling-street, and Holborn: hence so little appears of it between Tyburn and the Lock hospital; and probably its materials were long since wholly dug away to mend the highways. Upon this way in Southwark many Roman antiquities have been found, particularly a Janus of stone, in possession of Dr. Woodward: but our business shall be to prosecute the end of the second journey and the whole third and fourth of Antoninus.

From Shooters hill the direction of the road is very plain both ways: a mile westward from the bottom of the hill you find vestiges of it just upon the common: some part of the agger is left, made of gravel near at hand: from the top of Shooters hill you see it butts upon Westminster abbey, where it passes the Thames; and this demonstrates its original direction, and that it was begun from the east; for the turn of the river at Greenwich intercepts it, though not observed in maps: so the way is forced to deflect a little southward there, and then recovers its point: beyond that hill it is very strait as far as the ken reaches. On Black heath a vast tumulus, now used as a butt for archers, hereabouts in great request till Henry the VIIIth’s time: and hence the name of Shooters hill.

It is to be noted that in the second journey of Antoninus, Madviacis, Maidstone, and Durobrivis, Rochester, are transposed; therefore in the whole between London and Rochester it is twenty-eight miles, as in both the next journeys called twenty-seven, (but more rightly the former:) so that, as the Watling-street leads directly over Shooters hill between London and Rochester, and seeing the whole distance is answerable to fact, we need be in no pain for finding out the intermediate station. Noviomagus: doubtless it was about Wellend or Crayford, || as Mr. Somner judges, where the respective distances on each side point it out: notwithstanding, as to matters of antiquity, we have nothing to say. So with good reason Dr. Plot
settles Pennocrucium at Stretton in Staffordshire, because it is upon this same Watling-street, and answers the distances, though no Roman antiquities are there discovered; and the like must we do of other places. No doubt there were two stations between London and Rochester, though

May place, west of Crayford, seems Noviomagus. Oct. 1722, many Roman coins found in an urn near Croydon.

only one mentioned in the Itinerary: Northfleet seems to be the other, where many antiquities are found. I heard much talk of an old town at Plumstede, nearer the Thames, and to which they say the river came up originally: if true, perhaps this was the Noviomagus, and the Trinobantium, or Trenowyd of the Britons, i.e. the town of the Novii or Novantes, of which their old writers make a din, and would affix it to London: they say there are much ruins there. East of Crayford, all along upon the heath, as well as on the other side from Shooters hill, the ridge of the Watling-street is very visible; but beyond Dartford the common road leaves it quite on the south side, which induced me to follow the Roman: it becomes a lane presently, and passes in a very strait line, for five or six miles, through little valleys, woods, and inclosures; and about that distance I lost both it and myself in a wood by Southfleet; which obliged me to endeavour again to recover the great road: by the quantity of ground I went for that purpose, I guess this is a branch of the main road directly to Maidstone, for the convenience of such as intended to go strait to Lemanis by Durolenum. The soil from London to Dartford is gravel, but the highest ground has sand: beyond to Rochester it is chalk full of flints and gravel: the flints lie in strata, very black, and squeezed flat like mortar in the course of a wall; and above the chalk is pure sand.

The river Medway at Rochester is very broad and rapid, foaming most violently: there is a stately bridge built across it: below bridge lie about fifty of our biggest first-rate men of war unrigged, such as the Royal Sovereign, Britannia, Barfleur, &c. The Roman city was very strong, being walled about and ditched: near that angle below the bridge, encompassed by the river, is a large piece of Roman building of the wall, made of rubble-stone laid sloping side-ways, here and there Roman bricks: houses are built upon it, and it is broke through for a passage; in the inside much flint. Dr. Thorp has great numbers of antiquities found hereabouts. This city stands in an angle of the river: it seems to have been of a square form, the Watling-street running directly through it: most of the walls still remain, but repaired. The castle was built out of one angle by William the Conqueror, which together with the cathedral has altered the regular ground-plot of the city, as at Lincoln: the walls of the great tower now left are four yards thick. The body of the cathedral is of the original structure before the Conquest, repaired by bishop Gundulf an architect, who likewise built the castle: the great tower is now called Gundulf’s tower. The chalky cliff under the castle-wall next the river is a romantic sight: the rapidity of the river wastes it away: and then huge tracts of the wall fall down: in some places you see the bottom of the broad foundation, and which in others is carried down to the water. On the north side of the north-west tower of the church is Gundulf’s effigies. The front of the church is of the old work, but a new window put in the middle. The eastern gate of the city was pulled down not long ago: I saw many of the stones distributed among the adjacent buildings, being of a Roman cut.

We must now, according to the Itinerary, leave the Watling-street, and go to Maidstone. The road hither passes by that famous British monument called Kits-coty-house. It cannot be disputed but that Maidstone is the next Roman station. Maedwæg I apprehend signifies the meadows upon the river Vaga, which are here beautiful: whether the Latin word be

Rochester was a very strong place, and the water went quite round it.

Bishop Gundulf died 1108.
Madviacis, or Vagniacis, I see no difficulty in forming it from the British. †

The archbishop of Canterbury had a palace here, founded by John Ufford, finished by Simon Islep: a college or hospital was erected by A. B. Boniface, and a chantry by Thomas Arundel, now the free-school. About 1720, they dug up several canoos, made of hollowed trees, in the marshes of the river Medway above Maidstone: one is used for a boat to this day. I saw, in the hands of Dr. Dodd, a British coin of electrum, found at Addington near Malling, anno 1720, in the foundation of a stone wall: on the concave side a British horse rude enough; the convex was plain.

From thence the Itinerary leads us to Durolenum. The learned Talbot first guessed it to be Charing; and to me he seems to be in the right. It is upon a spring of the river Len. The present name is derived from the British Caer, as they called all Roman towns in after-times: anciently it was wrote Cering with a Saxon termination, intimating the meadows it stands upon. Roman antiquities are found all about, but nothing I have yet met withal, that particularly fixes the spot the Roman city stood upon. Near is a manor called Broughton; Chart ‡ is the name of the hundred, from two little adjoining villages: but at this place the distances answer well, and the roads in many parts appear: that from hence to Canterbury passed by Chilham; so over the river Stour by Sharnford, which retains the British name of a causeway. The archbishops of Canterbury had a castellated palace at Charing, probably given them by some of the first Saxon kings, as a royal demesne of theirs: there are large ruins of it still left. Here was a chantry founded by Sir John Burley. All the ground upon the river Len at the bottom of the great ridge of hills is sand, sometimes exceeding white; between that and the bottom of the hills it is flinty: the hills themselves are pure chalk. All Kent consists of large tracts of ground gradually rising from the east to a western ridge steep that way, so succeeded by another of like manner; but any of these tracts are made up of little hills and short valleys, quite of a different nature from those on the west side of the island: and Mr. Camden has observed this before us, as to the northern part of the island, p. 533. Britannia. We may gather an idea of the natural reason of it from what we spoke at first, of the ground hardening upon the instant of the earth's rotation.

After we have made this excursion with Antoninus, to take in these two stations, which seems to have been done to conduct travellers the nearest way to the portus Lemanis, we return again to Rochester, that we may finish the progress of the Watling-street.

From Rochester the Watling-street continues very strait to Canterbury, by Feversham, whither I went to visit the remains of the monastery founded by king Stephen, and where he was buried with his family. At present nothing left but two gate-houses, and they of mean structure: the hall was standing intire within this forty year; but now the whole monastery is level with the ground, and converted into orchards, so that I could not so much as guess at the place where the church was. They have a report still, that at the dissolution of abbeys they took up the coffin of

† The river Medvacus runs through Vicenza, a city in Italy, built by the Gauls. I suppose our present Britons, or Welsh, are Gauls, the same as Caesar conquered; that the oldest Britons are the Irish, who are much of Phœnician original, and part of the shepherds banished Africa, and who came along with Hercules Ægyptus, Assis, Melcartus, who built Carteja or Cadiz, and civilised the Celtic nations, remembered by the Gauls under the name of Hercules Ogmius.

‡ I find in this country, that the word Chart generally imports some works of antiquity. Chartway from E. Sutton to Munchilsey.

lead wherein the king was buried, and sold it: as for his corpse, they threw it into the Thames. Here king Ethelstan enacted laws, anno 903. At Newington seems to have been another station: many Roman coins and antiquities have been found there. Vide large accounts thereof in Burton's Itinerary, p. 181. and Casaubon's translation of Antoninus Philos. Beyond Broughton, which seems to have been another, ‖ you come to a very high hill, steep on the west. The Watling-street here first presents the tower of
the cathedral in its line, and both together make a fine show:

\[\text{Apparet rursum moles opera} \text{ viarum,} \]
\[\text{Consurgit stratis agger ubique suis.} \]

Canterbury is deservedly famous for religious as well as Roman antiquity, being the place where Christianity first made its entrance among our Saxon ancestors. Here are many remains of Roman buildings, many made of Roman materials in the Saxon times: many antiquities found in digging about the hop-grounds; your lordship has quantities of them. The city is strongly walled about, and many lunettes or towers at due intervals; a deep ditch close underneath, and a great rampart of earth within. The original ground-plot here, as in many other cities, is spoiled by churches built in the middle of streets. To the south is an old obscure gate, called Worth-gate, partly walled up: it is under the castle. This is entirely a Roman work: the semi-circular arch is of Roman brick, beautifully turned; the piers of stone; the thickness of it is three Roman feet. I suppose this the original gate of the Roman city, and from hence went the road which presently divides itself into two: the one goes by Chilham to Durolenum, over the river at Sharnford, as we said; the other goes in a very strait line, by the name of Stone-street, to the port of Lemanis. The castle built here in William the Conqueror's time, extending its limits beyond this gate, was the occasion of blocking it up; and so Winchup gate was built a little further eastward, to supply its use. The castle is much of the same form as that at Rochester, and the walls of the same thickness. A little further within the walls is a very high mount, called Dungeon hill: a ditch and high bank inclose the area before it: it seems to have been part of the old castle. Opposite to it without the walls is a hill, seeming to have been raised by the Danes when they besieged the city. The top of Dungeon hill is equal to the top of the castle, and has a fine prospect over the city and country. The materials of the city-walls are chiefly flint. Next to this, where the Watling-street comes, § is Riding-gate, built by a mayor of the city, but evidently in the place of the Roman one; for there is part of the Roman arch, and the pier of one side, still visible, but much lower than the present gate: and in a yard close by is part of the arch of a postern, or foot-gate, by the side of it: these arches are of Roman brick, and there are in the wall here and there some more fragments of the Roman work. The draught of it I have given in the plate of the city ground-plot, 96. Hence the Watling-street passes directly to Dover, over Barham downs. Next to East-gate is another gate, opposite to what they call St. Ethelbert's tower: this is the way to the port of Rutupium. Here is the famous monastery of St. Augustin, the first metropolitan, built, as they say, near the palace of the converted king Ethelbert: two gates remain next the city, and both very stately: perhaps one belonged to the palace, the other to the monastery, which doubtless as magnificent as richly endowed; and such its ruins demonstrate, and the great compass of ground it took up, incircled with a very high wall. Great vying was ever here between the religious of St. Austin and of Tho. à Becket, both very rich and contentious. At the west end of this church, as I conjecture, were two great towers: half of one is still remaining, called Ethel-berht's tower: all the whole stones and pillars about it are skinned off as far as they can reach; and every year a buttress, a side of an arch, or the like, passes sub hasta. There is part of the other standing, if it can be so said, that is only not fallen; I call it muro torto: it is a vast angular piece of the tower, about thirty foot high, which has been undermined by digging away a course at bottom, in order to be thrown down; but it happened only to disjoint itself from the foundation, and leaping, as it were, a little space, lodged itself in the ground in that inclining state, to the wonderment
of the vulgar, who do not discern the meaning of it, though the foundation it came from is sufficiently visible: thus happening to be equally poized, it is a sight somewhat dreadful, and forbids a too near approach on any side, with the apprehension of its falling that way. Under St. Ethelbert's tower is the porch where St. Augustin and his six successors, as Bede tells us, were interred: the arched roof is left, but ready to fall: the pavement is gone, in the middle of which was an altar. The adjacent close is full of religious ruins and foundations, one great part turned into a stable near the almery: all over they are busy in pulling it up, to sell the stones; which generally pays the rent, and yet the tenants of such places thrive never the more. In one corner of this field are the walls of a chapel, said to have been a christian temple before St. Augustin's time, and reconsecrated by him to St. Pancras: a great apple-tree and some plum-trees now grow in it: the lower part of it is really old, and mostly made of Roman brick, and thicker walls than the superstructure: there is an old Roman arch on the south side toward the altar, the top of it about as high as one's nose; so that the ground has been much raised: the present east window is a pointed arch, though made of Roman brick, later than St. Austin's time: near it a little room, said to have been king Ethelbert's pagan chapel: however it be, both these and the wall adjoining are mostly built of Roman brick: the breadth of the mortar is rather more than the brick, and full of pebbles; but the mark of the devil's claws, there observed by the vulgar, is fantastical. The garden and orchard adjoining seem to lie in their ancient form: there is a large square mount close by the wall, which it equals in height, and gives a prospect into the fields. Your lordship has a huge water-pipe dug up among many other antiquities in a Roman bath discovered at Canterbury: it is five inches and a half diameter at the smaller end, seventeen long, seven in diameter at the broad end: they were fastened into one another with strong terrace cement. The great number of other antiquities of all sorts, found at and about this city, make part of your fine collection.

Eastward of this, and farther out of the city, is the church of St. Martin, said to be the christian place of devotion, where king Ethelbert's queen used to go, and St. Austin's first see: it is built, for the most part, of Roman brick: in the middle is a very large old-fashioned font, supposed that where the king was baptised. North of the city is a very small remnant of St. Gregory's chapel, founded probably by Austin to the honour of his patron.

The cathedral of Canterbury is very stately, but neither in length, breadth, nor height, especially in front, equal to Lincoln, in my judgement: it is entirely vaulted with stone, and of a very pretty model of building, but much too high for its breadth, as all Gothic buildings were. I believe they got this ill taste from building upon the old foundations, the ancient churches being much narrower and lower than in the succeeding times: when greater riches flowed in upon them, they carried their walls and roofs to an unseemly height. The place where Thomas à Becket's shrine stood, is sufficiently known by the mark of the devoted knees quite around it, which have left deep impressions in the hard coarse marble. The Black Prince has a noble monument of brass: that of Henry IV. is a good tomb, and there is a pretty chapel hard by, to say mass for him. There is an old picture of arch-bishop Becket's martyrdom, as call'd; and upon the wall an old painting of the siege of Jerusalem, in our old habits. Here are several monuments of the bishops. The metropolitan chair is of grey marble, standing behind the high altar: the cloysters are pretty good, and a very large chapel near them, called Sermon-house, wainscotted with Irish oak. The reason of the ancient name of this British city seems intimated in this verse of Virgil,

Divinosque lacus & averna sonantia silvis. Æn. iii.

The poor derivation of the commentators thereon ought to be referred to Tuscan original, to which our Celtic is a-kin.
Leaving Canterbury, I journeyed to find out Rutupiae. At Wingham I saw a very large barrow, of Celtic make, by the road side, called the Mount: upon enquiry I found there were several more in the parish, and that a lane here is called Port-lane; doubtless the Roman road, for here the common road goes more southward. The Roman city and port without peradventure was the place now called Stonar, or Stanar, as they pronounce it, from the stony foundations I chuse to think; over-against Sandwich, or rather half a mile lower upon the river coming from Canterbury, and almost encompassed by it. This river at first discharged itself into the sea by Ebbeesflete, north of the Roman city, till the sand, pouring so directly upon it, obliged the stream to slide under the cliff by Richborough castle, and so by Sandwich: then, coming in obliquely by the weight of its waters, it maintains its passage. I conceit the etymology of Rhutupium, about which the learned contend much, is to be sought for in this Ebbeesflete; and that this water was originally called Ube, or Tyvi: rhyd tyf, or tyvi, is the passage over it: the Saxons called it Reptacester, a contraction only from Rhutupicester: and so our Ebbe at present came from them: Ruptimuth anciently. Hence you see far into the isle of Thanet and Ramsgate cliff, named from the Romans, thrusting its chalky promontory into the sea. This was the chief port for the roman navy. At present there is only a farm-house or two, standing on an elevation in the marshes: they informed me that here had been a great city, and that they can discover all the streets when the corn is on the ground; and those streets are nothing but pure gravel laid very deep: innumerable stones and foundations have been dug up, but now mostly evacuated; and no doubt Sandwich was built out of it. The river runs close by it, with difficulty preserving its current to the sea; but no doubt originally it was an open beech, or port: perhaps the city itself was an island. The old mouth of the river is now filled up by the astonishing quantity of small pebbles thrown into this bay by the roll of

† The ground east of Canterbury is sandy, and favourable for hops.

‡ In this port landed St. Augustin, the apostle of our Saxon ancestors.

125

the ocean: you see here a hundred acres of this flat ground covered over with them six or seven foot deep, and looking blue like the water. I fancied the people that lived here, in like danger with those that travel the sandy deserts of Africa, or Arabia. Here are two elevations, where they say two churches stood: upon one, where an elder-tree grows, much rubble and stone is left, but no part of any building; nor is it easy to distinguish what it was originally.

Richborough castle, as now called, was the fort as it were to this city, and station of the garrison, which was to watch and defend the port and sea-coast hereabout; or rather one of those castles built upon the littus Saxonicum, in the time of Theodosius: it is a mile off Stanar and Sandwich, situate upon the highest elevation near hand, and being the only small part of a bold shore in all this bay: the river runs at the foot of it,

— arvaeque urbem

Littore diductam angusto interluit aestu. VīRG. AEn. iii.

It is a most noble remnant of Roman antiquity, where in later times of their empire the Legio II. Aug. was quartered: the walls on three sides are pretty intire, and in some places still about twenty-five or thirty foot high, without any ditch: the side next the sea being upon a kind of cliff, the top of the wall is but level with the ground: beside, at the east angle the wall descends to another slope just upon the river, which seems to have been in the nature of an outwork, or gradual ascent into the castle: the ground on the inside is pretty much raised. In the middle of the north-east side there is a square work jutting out from the wall, which seems to have been an oblique gate to enter at, for those that came from the water side; and it is not unlikely that gap on the north-west side was another gate: it was a square CV. paces one way, CL. the other; according to the Roman method of making camps, a third part longer than their breadth.
There is a foundation within, which has caused many words among the Kentish antiquaries; seems to have been a Pharos, or lodging for the commanding officer, a praetorium: there are foundations of several apartments, the walls monstrously thick and strong. It is manifest to any one that seriously contemplates the ruins of the walls in divers places, that this castle was destroyed by great violence and industriously; I guess, by the Saxons immediately after the Romans left the island, when they could more boldly make descents upon the coast: the reason why, is evident from the intent of these castles: upon the eastern corner, especially, great piles of wall lie upon one another like rocks: in other places cavities are hewn out of its thickness, that would make good lodging-rooms: the manner of the composition of the walls is seven courses of small hewn stone, which take up four Roman feet; then two courses of Roman brick, which are white, like the brick in the isle of Ely. I observe all the brick about Sandwich to be of the same colour, made of whitish clay. The walls are twelve foot thick: the inward body thereof is made of flint and excessive hard mortar.

Sandwich bears directly south. Dr. Holland talks of a carved head over one of the gates; but I could find no such thing now. In the way thither, upon an eminence is the carcass of a castrrensian amphitheatre made of turf, I suppose, for the exercise and diversion of the garrison: the soil of it is gravel and sand, and has been long ploughed over, that we need not wonder it is so level. There are three Roman tumuli before Sandwich west gate; one a windmill stands on: it is not easy to assign which Contentus was buried under.

Contentum tellus quem Rutupina tegit. AUSON.

South of Sandwich, as we go along upon the sea-shore, are six large and broad Celtic tumuli, equidistant: the second from the town has been dug away, to raise a little fort upon the road: they all stand in a line east and west. § This flat coast is fenced against the ocean by the sand-downs, which in Lincolnshire we call meals: but within the memory of man, as they told me, the sea has commenced a new method of guarding against its own violence, by covering the shore, for a great depth and height, with the pebbles afore mentioned; which is an odd mutation in nature; and it is observable that these pebbles come from the south. I rode from Sandwich as far as Hithe, upon the brink of the shore or cliff, in sight of France all the way; and nothing could be more entertaining in this autumnal season, when the weather is generally clear, serene and calm. Much sea tithymal grows here, and a very pretty plant, papaver cornutum flore luteo, rock samphire feeding upon petroleum, a most excellent pickle, and many more. || The murmur of the ocean has a noble solemnity in it, as Homer says, when latinised,

Eructante salo raucam dant littora vocem.

More copiously expressed in Virgil,

Et gemitum ingerent pelagi, pulsataque saxa,
Audimus longe, fractasque ad littora voce.
Exsultantque vada atque astra miscentur arenæ. AEn. iii.

which is the exact idea of this place. By listening attentively I observed this noise of the ocean is by fits, at short but equal intervals; which I believe gave occasion to that fancy of the ancients, that every tenth wave was the largest; of which Ovid has a distich.

Sandown castle is composed of four lunettes of very thick arched work of stone, with many port-holes for great guns: in the middle is a great round tower, with a cistern at top; underneath an arched cavern bomb-proof: a foss encompasses the whole, to which there is a passage over a draw-bridge. Deal castle and Walmer castle are of the same nature, all built by Henry VIII. to guard this naked level coast: moreover, lines are drawn along between castle and castle, and at proper intervals round bastions with a
ditch and parapet of earth, where cannon may be planted, as in the infancy of fortification. These are what Camden calls Rome’s works, and fancies to be remnants of Caesar’s ship-camp: the neighbours with as little truth affirm they were thrown up by Oliver Cromwell, for reduction of these

§ There are a great number of large barrows about Sandwich; one at Winsborough, with a tree upon it; so it is called by the vulgar, but the learned make it Wednesborough: between that and Sandwich is another, called Marvil hill.

∥ Among the sand-hills by Sandwich I found a curious plant, which I take to be the *satyrium abortivum*, or bird’s-nest of Gerard: it has a bulbous root of a red colour; the stem sometimes a foot long, whitish like young asparagus, and almost naked; a great spike of white flowers, of the cuculate sort, with a black apex: they are exceeding odoriferous. I found much eryngo there, which smells pleasantly when broken; and on all the banks of the ditches hereabouts garden-fennel grows in great plenty.

Sandwich is in a miserable, decayed condition, following apace the downfall of its mother Rutupium: it might easily be made the best harbour on this coast, by cutting a new channel for the river about a mile and a half through the sand-hills south-easterly; for the water of the river Stour would sufficiently scour it, did it run strait, and with that direction. All the walls and bulwarks of the town are dismantled, the gates tumbling down; and a few cannon lie scattered here and there. This town likewise might be made very strong; for, besides the river Stour, another rivulet runs through it, that would keep the ditches always full.

127

castles: one is close by the north side of Deal, and two between Deal and Walmer castle. At Walmer castle the cliff begins for about half a mile southward with a gentle rise to a hill, whereon is a tumulus; then the shore is plain again in a valley till you come to Kings-wold, which is half a mile’s space. Between Walmer castle and Deal I take to be the spot where Caesar landed in his first expedition, because it is the first place where the shore can be ascended north of Dover, and exactly answers his assigned distance of eight miles: probably in his second expedition, when he came with many more ships, and had a perfect knowledge of the country, he went a little farther in the downs, whereabouts now is Deal, a town lately sprung up from the mariners. As for his sea-camps, it is vain to expect a sight of them; they are many ages since absorpt by the ocean, which has so long been exercising its power, and wasting the land away. Even since Harry the VIIIth’s time it has carried off the sea-ward esplanades of the three castles, and one half of two of the three circular forts. Indeed, of late years, the providential ejectment of those pebbles has put a stop to it in some measure; and it is amazing to see how it by degrees fills up these fosses and trenches, and sometimes flies over the banks a good way up into the land, with a power well expressed by the poet,

> Aut vaga cum Tethys Rutupinaque littora fervent. LUCAN. vi.

But of this affair of Caesar’s I reserve to myself another opportunity of speaking, when I shall expressly treat of his expedition hither. At Deal castle is a very good well, though close by the sea.

Now my journey lay entirely upon the edge of the cliffs, whose precipitous height, with the noble prospect at sea, and most awful roaring of the waves, filled the mind with a sense of Nature’s majesty. About St. Margaret’s on cliff, near the light-houses, I saw in two places a great number of little tumuli, of unequal bulk, close by one another; and the like I found frequently about Barham downs, and between Hardres and Chilham, and other places. I know not that such have ever been taken notice of; the people say they were burying-places of the Danes; probably digging into them might give us some satisfaction. I believe them Celtic, because I saw many sorts of them, and such as appear on Salisbury plain.

Dover is a most romantic situation: it is a great valley, and the only one about this coast where water is admitted inwards of the cliff, here very high; and a running brook discharges itself into the sea: ¶ the water for merly came a good way higher up, and made a large port; and they have found anchors above the town. The Roman city of Dubris was to the south of the river: the Watling-street enters it at Bigin gate, coming very strait from Canterbury over Barham down, where it is very perfect: § but=
† At Hardres place, the seat of Sir William Hardres, lay king Henry VIII. when going upon his expedition at Boloign: he left his picture here, and an old dagger, very broad, and about as long as a Roman sword: the handle is of silver gilt and enamelled, with mottoes on it. The old gates of this seat were the gates of Boloign, brought thence at that siege by Sir William’s ancestor, who accompanied the king.

∥ By St. Margaret’s are many natural cavities in the chalk cliffs, and an admirable large spring arising from the beach with great force when the tide is out.

§ To Dover from Canterbury the Watling-street is still the common way: it is left intire over Barham downs, with a high ridge strait pointing to Canterbury cathedral tower: as soon as it enters the downs it traverses a group of Celtic barrows, then leaves a small camp of Caesar’s: further on it has been basely enclosed through two fields, and levelled with ploughing: then it passes by a great single barrow, whereon stood the mill, which is now removed higher up: then it ascends the hill to a hedge corner, where are three barrows, a great one between two little ones, all inclosed with a double square intrenchment of no great bulk: I fancy them Roman, because parallel to, and close by, the Roman road: the great barrow has a cavity at top, and an entrance eastward: whether casually, or with design, I know not. At Lyddon the Watling-street falls into that noble valley of Dover, made of two huge ridges of chalk, which divide

ting directly upon the great tower of the cathedral, it bears a little more northerly than north-west. This city was an oblong square, and some of the walls are left: the churches are of a very antique make: that of St. Martin is collegiate, founded by Wightred king of Kent; it is a venerable ruin: the east end seems to have terminated in three semi-circular works: it was built in form of a cross, as to its main body. Much remains of the priory, now a farm-house. The maison dieu over-against it is become a store-house: here the knights Hospitallers or Templars lodged, coming into, or going out of, the kingdom. The piers that form the haven, or large bason, are costly and great works: above is a fort with four bastions of modern date. The broad beach which lies at the mouth of this great valley, and was the harbour in Caesar’s time, is very delightful: it is no little part of the diversion, in walking there, to observe the odd produce of the ocean thrown up under your feet, and the sea-plants that grow there; the umbelli, star-fishes, many curious fossils and shells; the eringo, sea-lungs, sea-weed, or ood as call’d, &c. One long street here is named Snaregate, from the most tremendous rocks of chalk hanging directly over the houses; as Cnarsborough in Yorkshire, says Mr. Camden, p. 715.

The castle is the strongest place in the world, of old fortification; it takes up thirty acres of ground: it is an amazing congeries of walls, ditches, arches, embattlements, mounts, and all imaginable contrivances to render it impregnable after the old mode: but with highest regret I beheld this most noble and memorable fortress, once thought the key of Britain, and that has divers times had the honour to save the kingdom from conquest and slavery, now become a common prey to the people that belong to it: in the late wars with France they kept 1500 prisoners in the great castle; but within this twelvemonth they have carried away the timbers and floors, disabling it even from that use. Thus much I think out of gratitude is its due; let it stand a monument of antiquity, or sink slowly by its own ruin. The brass gun call’d Queen Elizabeth’s Pocket-pistol is a great curiosity, twenty-two foot long: it requires fifteen pound of powder, and carries a ball seven miles (as the gunner told me;) it is excellently well wrought. I saw two very old keys, and a brass horn, which seem to be the ensigns of authority belonging to the constable of the castle, or lord warden of the cinque ports. One part of the fortifications consists of a large circular work, in which stands the old church, said to have been built by Lucius, an ancient king of the Britons, and first christian. Bishop Stillinge thet thinks he is no romantic person, but reigned in Kent and Sussex: sex: however that be, I believe this church is as ancient as the time assigned him. There is not much doubt to be made, that upon this hill was a castrum of the Romans, like that at Richborough, to guard this haven. It is somewhat surprizing that our Saxon ancestors should take great pains to demolish Roman works, though they wanted such in the same places, and were forced to build them again. I look upon it as an argument that they had no thoughts of conquering the island at first, and destroyed these
bulwarks, that such might not hinder their depredations; but espying
the nakedness of the land, thoroughly evacuated of its youth and men of
arms by the Romans, they found a conquest practicable: then were they
themselves into lesser valleys, dropping into the great one at regular distances, as the little
leaves of plants meet at the main stem: this valley, when viewed from the end, looks like a
landscape on scenes lessening, according to perspective, to Dover, between the two Phari and
the sea at the end, inclosed between them. The street slides along the northern declivity, crosses
the rivulet which wanders through the midst of the valley at Buckland, so to Biggin gate, where
is its termination, by the side of the old port, having now run from Chester about 250 miles.
Many barrows on the sides of those hills.

obliged to repair these castles. The church we are speaking of was built,
in the first times of christianity, out of part of the Roman ruins, whence
there are huge quantities of Roman bricks laid into the work: the arches
are entirely turned with them; the corners and many parts, both within and
without, are built up therewith; and the remainder is of stone originally cut
by the Romans: it is in form of a cross, and has a square tower in the middle.
I have represented the drawing of it in plate 48. The stone windows of
this church are of later date than the building; they have been put in long
since: but the greatest curiosity here is the Pharos, or Roman watch-tower,
standing at the west end of the church: notwithstanding it is so much
disfigured by new daubing with mortar, casing and mending, I discovered
its primary intention the first minute I saw it; and sent the three prints of
it, which I here present the reader, to monsieur Moriatucon, at the in=
stances of my most honoured lord, the archbishop of Canterbury. I was in
hopes they would have been more useful to that celebrated author; for
therein at least he might have found, that the building which he first
took for a Pharos, and whereof he gives us four views, is only the tower of
the church we were talking of. The description of this curious work,
which I believe the most perfect of any left, in short is thus.

In the 47th plate we have shown the ground-plot upon which it is
formed, and a section of the work; whence we may readily observe that
the design is simple, but admirably contrived for its use and purpose; the
base is octagonal without, within a square; but the sides of the square and
octagon are equal, viz. fifteen Roman feet, which reduces the wall to the
thickness of ten feet. In this manner it was carried up to the top, which
was much higher than at present; but it retires inward continually from
all sides, with much the same proportion as an Egyptian obelus. Upon
four of these sides there are windows narrow, handsomely turned with a
semi-circular arch of Roman brick six foot high, so that the outside of
it appears as in our 46th plate. The door to it is on the east side, about
six foot wide, very well turned over head, with an arch made of a course
of Roman brick and stone alternately, fourteen foot high. All the stones of
this work are of a narrow scantling; and the manner of the composure,
throughout, is perfectly the same with that lately described at Richborough
castle: there are first two courses of this brick, which is level with the
bottom of the windows; then seven courses of hewn stone, which mount
up to the top of the windows; then two courses of brick, seven of stone alter=
nately, to the top; every window by this means reaching to a stage or story.
There are five of these stages left: the windows are visible enough to a
discerning eye, though some be stoped up, others covered over, others
have modern church-like windows of stone put in. I suppose the inside
was intirely filled up with a stair-case: the height of what is left is forty foot;
I believe there was twenty foot more originally: and the whole number of
windows on a side was eight. This building was made use of as a steeple,
and had a pleasant ring of bells in it, which Sir George Rook procured
to be carried away to Portsmouth. Since then the office of the ordnance,
under pretext of savingness, have taken away the lead that covered it, and
left this rare piece of art and masonry to struggle with the sea, air and wea=
ther. Mr. Degg gave me a coin of Dioclesian, found here. The Erping=
hams arms are patched up against one side of the Pharos, being two bars and
a canton; so that I suppose it was repaired in Henry the Fifth's tme, lord
Erpingham then warden of Dover castle. In the Roman castle here the Tungrican soldiers had their station. I have heard there is another such Pharos at St. Andrew’s in Scotland.†

On the other high cliff opposite to this, beyond the town, has been another Pharos: some part of the bottom part of it is still left, called The Devil’s Drop, from the strength of the mortar: others call it Bre donstone. Here the new constable of the castle is sworn. If we consider the ancient state of Dover, we must imagine that the little river ran directly into the sea, and left a harbour close to the walls of the town; but in process of time, as the sea threw up that vast beach which lies between the town and it, the river was forced by an oblique passage to creep along the shore under the southern cliff, and there vent itself where now is the harbour. This is what Nature practises in the microcosm in innumerable instances, as the passage of the gall and pancreatic juice into the intestines, in the duct of the urine from the ureters into the bladder, of the chyle into the torrent of the blood, insinuating themselves for some space between the membranes. And this caution may be of service in forming harbours; as in that costly work of the French king’s before Dunkirk, where two banks or piers projected for half a mile through the sands directly, which ought rather to have gone downwards a little towards the fall of the tide. The cliffs here are of solid chalk to the very bottom, full of the blackest flints; and those at Calais seem perfectly like them; and no doubt a long vein of chalk is continued from one to the other under the sea, and perhaps through many countries: but that these two places were ever contiguous, or joined by an isthmus, is chimerical.

Though the mariners have much mathematics on board, and in all their tackle and machinery, yet here I had occasion of observing a gross error, that has not been thought on, in the shape of their oars; where the extremity of that fan-like part, which opposes the water in rowing, is broadest. Now this is quite contrary to Nature’s method, who is the best geometrician in like cases: in the shape of a single feather, or in the wings of birds, the extremity is always pointed, and the broadest part is nearest the joint where the power lies, analogous to the fulcrum of levers; therefore is drawn off to a narrower scantling, as the part recedes from it, and the effect of the moving force: thus it is even in the wings of butterflies, and all other insects, as well as birds; and so in the water-beetles that row with oars. Though the broad part resists the water more as farther distant from the fulcrum, yet it requires more proportionable strength; and in my judgment, therefore, oars ought to be made quite the contrary way, and drawn off into a point, the broadest part nearest the hand; and I doubt not but equal strength will then out-row the other, ceteris paribus.⋆

Beyond Dover southward the cliff is exceedingly high to Folkstone. In the road two great Roman barrows, which will be eaten away in a few years by the sea. Here this larger track of cliff ends, as to the ocean, and slants off westward towards Wye in a long ledge very steep all the way to the west. The whole county of Kent consists of three or four of these parcels, lying parallel, and running nearly north and south; they rise gently from the east as a reclining plain, and then end suddenly on the western side with a quick descent: at bottom begins another such plain, and it ends in like manner after it has gone its proper distance, to be alike succeeded, as we said before. Beyond this we are upon, southward is a lesser ledge of high ground sandy and rocky, but good land, especially in the valleys, and full of wood. This is terminated by Romney marsh, such another country as our Lincolnshire Holland. To the right of us is Eleham, seated in a pleasant concavity: there has been a religious house.

† Such a Roman Pharos at Damiata in Egypt, the view of it in Le Brun, plate 70. letter A.

⋆ I suppose likewise that the sails of ships ought to be narrower at the top, where they are fastened to the yard’s arm, broader at bottom, like a cloak; and so they are ordinarily made in some measure.
Upon one end of our upper chalk-hills, near Folkstone, is a camp called Castle hill.

Now descending, Folkstone offers itself, still standing on a cliff, but not so high as the former, and of a rocky composure, the other being chalk: it was anciently called Flostane, a lesser rock, or cliff of stone; so that it probably was the lapis tituli of the Romans. Here is a copious spring runs through the town. Near the church, upon the sea side, is a square plain, like that I observed at Burgh in Lincolnshire, and was of the same use. I saw two pieces of old wall hanging over the terrible cliff, seemingly of Roman work: here are some old guns, one of iron of a very odd cast, no doubt as old as Henry the Eighth's time. Many Roman coins have been found here. A nunnery was built by Eanswide, a religious daughter of Eadbald king of Kent.

I passed by Sandgate castle, another of those built by Henry VIII. in a little valley where the shore is plain: then we enter upon the beach. Here are many springs which come down from the higher ground, and sink immediately into this beach, rendering it a little boggy; this I thought very odd. You ride through a wood of sea-poppies, which is a fine variety in nature, casting all the numerous seeds into a long pod, instead of the common globular head: the leaves look hoary, like sea-ragwort, and are finely crisped; the flowers of a most delicate yellow, taken notice of by the poet,

Ore floridulo nitens
Alba parthenice velut
Luteumve papaver.  CATULL.

HYTHE.

Hythe stands on the edge of this lesser ridge, but the marsh has intercepted it from the sea. They talk much of their charnel-house full of human bones, said to have been the massacred Danes; but I thought it not worth going to see, nor believed their report of it. They say this has been a great city, and reach'd as far as West Hythe, where is an old ruinous chapel: they mean undoubtedly the city of Lemanis. Here were two hosptals, St. Bartholomew's, and St. Leonard's.

I visited Saltwood castle, in hopes to find somewhat Roman, as is reported: it is a very strong seat of the archbishop's: the outer wall has towers and battlements, and a deep ditch: within, and on one side, stands the main body of the place: two great and high towers at the gate of this, over which are the founder's arms, archbishop Courtney, in two escutcheons; the first impaled with those of the see; the other plain, a label over three plates. This inner work has a stronger and higher wall, with a broad embattled parapet at top: within is a court, but the lodgings are all demolished: the floor of the ruinous chapel is strongly vaulted: at the middle of the court is a large square well, which is the only thing I saw that looked like Roman. It is said that hereabouts anchors are dug up; which, if true, is not owing to the sea's coming so high, as the vulgar think, for that is impossible; but to an iron forge of the Romans, conveniently placed, where so much wood grows, so near the sea, and so many ports. They say too that Roman coins are found at Newington, not far off here.

† At Folkstone the famous Dr. Harvey was born, ob. 1657.

A little way further, at the end of the Stane-street, the Roman road from Canterbury; and at a proper distance from thence is the port of Lemanis. I am surprized that some Kentish antiquaries should, by pretended corrections of the Itinerary, send it farther off to the southern coasts. As soon as I came to Limne church, looking from the brow of the hill to the subjacent marshes, I descried the tattered Roman walls, situate on this southern decline, almost at the bottom. One would imagine the name came from the Stone-street; for such it literally signifies, via lapidea: this is a solid rock of stone laid out in a strait line between here and Canterbury. Thus in Yorkshire another Roman road is called Leming-lane, from its stony composure. Lhe signifies a way in British; maen, a stone. Its
present appellation of Studfal castle gives occasion to some uncouth etymologies: without any difficulty I think it derived from stæd-weall, the sea-shore, in Saxon; so that it signifies no more than castrum littoreum. This fine remnant of Roman work, and which was the garrison of the Turnacensian band, hangs as it were upon the side of the hill; for it is pretty steep in descent; the walls include about twelve acres of ground, in form somewhat squarish, without any ditch: a pretty brook, arising from the rock west of the church, runs for some space on the east side of the wall; then passes through it, and so along its lowermost edge by the farm-house at bottom. The composition of the wall is similar to that of Richborough; but instead of hewn stone and regular courses, as there, the interval between the three layers of Roman brick is made of rag-stone: the brick too is of the same whitish kind, but remarkably thin. I suppose the clay shrank much in burning. This interval of stone is four feet of Roman standard: the walls are twelve foot thick, and have some round holes at equal spaces, that run quite through, as we observed at Sorbiodunum and Verolanium; perhaps haps to let the air in for drying the wall, being of so great a thickness. Here are several of the circular, or rather elliptic buttments, as thick as the wall, like those at the castle of Garionenum, near Yarmouth in Norfolk, in plate 58. which my worthy and learned friend Mr. Hare gave me from his own mensuration. It is a piece of masonry, I must own, unaccountable to me: they are like round towers or bastions, but solid; and some scarce join to the wall at the sides, but go quite through to the inside. The circuit of this wall is manifest enough on three sides, but that southward is levelled to the ground: every where else, where not standing, it lies sideways, flat, close by, in prodigious parcels; or where standing, cracked through the whole solid thickness, as if Time was in a merry humour, and ruined it in sport: but I believe it is the effect of design and much labour, as I said of Richborough: probably the Saxons or Danes thus dismantled it, to render it useless against their incursions. Where this wall is standing, it is ten foot high or more, made with excellent cement: on the eastern side is such another gate, formed by the return of the wall, as at the place last mention’d. Geo. Hunt, an old man, living in the farm-house, told me

* The seat of Ostenhanger, through the park whereof the Stone-street runs to Limne, was a noble building: they sold it lately for 1000 pounds to a mason, who pulled it all down. An inscription of the chapel there is now made a stone step in the house of Mr. Smith of Stanford, thus copied by Mr. Godfrey:

IVIL. V. ET. XX A LINCARNATION NOSTRE CHRIST ET LE XII. ANNE DV TRES HAVLT ET TRES SANT ET TRES EXCELLENT PRINCE NOSTRE ET ROY HERY VIII A LE HONEVR DV ET DE LA GLORIEVSIE VIERGSE MARGCHAPELLE PAR MESSIRE EDOVARD POYNINGS CHEVALIER DE LA NOBLE ORDRE DV GARTIER ET CONTRE ROYLER DE LA MASON DV ROY CVY DIEV DDINT SA GRACE ET BONNE VIE ET LONGVE ET PARADIS A LA FIN AMEN.

133

he has found coins here: he says, once the sea-bank broke, and his house with all the adjacent marshes was floated: for the level of the ocean is higher than this place; but it has fenc’d itself out by raising the ground continually near the shore, as it does in other like marshes. Whether the sea reached this lower wall, even in the time of the Romans, I cannot determine; for I do not believe this was the very port, but the castle belonging to it: that, I rather think, was somewhat more eastward, about West Hithe; and there, the town that belonged to it: for they find old foundations frequently under the side of the hill, laid in strong terrace mortar. The rev. Mr. Bagnal, minister of the place, informs me, that the field, of about sixteen acres of ground, adjoining to the church-yard of Limne, is to this day called the Northern town; nor do they know that it ever had any other name; which intimates that the Roman town was thereabouts, lying upon the slope of the hill, as the castle does, and to the east of it. This port is now called Ship-way, where the limenarcha, or lord warden of the cinque ports, was anciently sworn; where their courts were kept, and all the pleas relating to these ports: since the decay thereof, that ceremony is transferred to Dover. This Ship-way too
denominates the lathe, or division of the country. Leland says, the people of Limne had an horn and mace, remaining ensigns of their authority. Thus have we conducted our journey, for the space of 500 miles, all upon Roman roads, to these three famous ports on the eastern shore, where commonly the great Roman emperors and generals landed from the continent; and in which we have run over such notices as occurred to us in thirty-five Roman stations, many camps, and other things of highest antiquity. The season of the year for expeditions being far spent, it is time to release your lordship’s patience, and retire into harbour, concluding with the great Roman wit, in his poetical voyage,

Lemanis longae finis chartaeque, viæque.

10 Octob. 1722.

<Stukeley died in 1765. Eleven years later, a second edition of his ‘Itinerarium curiosum’ was published. Whose idea this was I do not know. The copy text was (so it seems) Stukeley’s own annotated copy of the first edition. As far as Kent is concerned, the added passages do not amount to much, but some of them are of interest (e.g. the inscription from Westenhanger (p. 132), mentioned also by Harris (1719, p. 295)). The most important feature of this edition is the inclusion in volume 2 of a series of plates, ‘Centuria II’, which had remained unpublished during Stukeley’s lifetime. (I have listed all the plates that relate to Kent in a separate file.) Passages printed in grey are inherited from the first edition (except that this time round the compositor tidied up the spelling and punctuation); alterations and additions are black. The marginal references to the plates in the second volume were presumably inserted by the anonymous editor; so I have printed those in blue. – C.F. March 2011.>
